COVER LETTER

October 08, 2022

JOHN SMITH
Baton Rouge,
Los Angelos,
California, USA

Dear Mr Smith

I am an upcoming graduate of Utah Valley University's web and app development program. I believe that I have developed the skills necessary to be a strong team member at your company. My primary skills are in web development, but I have also acquired a strong foundation in UI & UX design as a part of my education at Utah Valley University.

I have experience working on teams to build websites from the ground up. I also have experience redesigning existing websites to better fit the clients identity as well as streamline the experience for their users.

- Strong proficiency in JavaScript, HTML & CSS.
- The tech industry is ever evolving and I am always trying to improve my understanding of it.
- Strong communication skills from experience working in collaborative environments.

I believe that my previous experiences and my forward thinking mentality would be a great investment for IBM. I hope you will review my attached resume and please dont hesitate to contact me with questions.

Thank you for your consideration,

Mike Dahle

ABOUT

I am a quick learner who is new to the field of web development. But in the few years I have been studying web development at UVU I have aquired the skills to not only be a competent web developer, but I am also familiar with the basics of designing a website.

I have experience working with a team to build industry standard websites for companies and institutions. I also strive to keep up with the evolving standards and trends within my field of expertise.

I look forward to continuing to improve my current knowledge of web development and to learn new things and adapt to the past paced world of coding.
